DIGITAL LABELS (BAR CODED LABELS)

Universal Postal Union (UPU) is the specialised agency of the United Nations that regulates the universal postal service. The postal services of its 192 member countries form the largest physical distribution network in the world. More than 5 million postal employees working in over 660 000 post offices all over the world handle an annual total of 434 billion letter-post items in the domestic service and 5,5 billion in the international service. More than 6 billion parcels are sent by post annually. Keeping pace with the changing communications market, postal operators are increasingly using new communication and information technologies to move beyond what is traditionally regarded as their core postal business.

The UPU S10 standard defines a system for assigning 13-character identifiers to postal items for the purpose of tracking and tracing them during shipping.

The identifiers consist of a two letter service indicator code, an eight digit serial number (in the range 00000000 to 99999999), a single check-digit, and a two-letter ISO country code—the latter identifying the issuing postal administration's country.
